Swallow 1648.

An Almanacke, for the

yeere of our Lord God 1648.

Being Biſſextile or Leap-yeare, and from the Worlds Creation

5648.

Calculated properly for the famous Univerſity and Town of *Cambridge*, where the Pole is elevated 52. degrees and 17. minutes above the Horizon.

And God ſaid, Let there be lights in the firmament of the heaven, to divide the day from the night: and let them be for ſignes and ſeaſons, and for dayes and yeares. Gen. 1. 14.

LONDON

Printed by *John Dawſon* for the Company of *Stationers*.

Astronomicall notes for the yeare 1648.

The true or apparent length of the trophicall year, is 365 dayes, 5 houres, 55 minnies 48 seconds, and 9 thirds.

The greatest obliquity of the Zodiack is 23 degrees, 28 minutes, and foure thirds.

The precession of the Equinoctiall is 28 degrees, 32 minutes 42 seconds, 7 thirds, and 22 fourths.

♄. Saturn beginneth to be direct on the 18 day of January, & continueth so untill the 11 of September, at which time he begins again to be retrograde.

♃. Jupiter also beginneth to be direct on the 16 day of April, and is so even all the yeare after

♂. Mars is not at all retrograde in this year

♀. Venus also is direct throughout the whole year.

☿. Mercury is retrograde untill the 8 of January. Retrograde againe from the 10 of Aprill to the 2 of May. And retrograde from the 1 of August to the 27 of the same. Retrograde also from the 9 of November till the 4 of December. But at all other times direct.

¶ Note also that ♄ and ☉ will be in conjunction on the 16 day of May. In conjunction also with ♀ June the 2. With ☿ June the 3. with ♂ June the 28.

Jupiter and ♀ in conjunct on September 9. Before which (viz September 2) he and Sol are joyned: about which time great winds.

♂ and ☉ likewise in conjunction January the 18, ♂ and ♀ February the 10 and May the 9 ferè ♂ and ♀ May the 25. ♂ with ♄ June the 9 in the 11 degree of Gemini; and that is the City signe, as Astrologers use to reckon: in which conjunction ♄ hath the greatest elevation This is the most remarkable conjunction; and therefore best of this I shall mention no other.

A Computation of the Six Ages of the World, and of the number of yeares expired with this yeare of our Lord 1648.

From the

Creation unto the Flood	1656	First Age.
Creation till this yeare	5658	
Flood till this yeare	4002	
Flood to Abrahams birth	353	Second Age.
Birth of Abraham till this yeare.	3649	
Birth of Abraham till Davids time of Reigne	941	Third Age.
Reigne of David till this yeare	2708	
Reigne of David till the Captivity began	451	Fourth Age.
Captivity till this yeare	2257	
Captivity till the birth of Christ	608	Fifth Age.
Birth of Christ till this yeares end	1648	

The Sixth Age beginneth at the birth of Christ, and hath continued 1647. yeares compleat, and is now (according to the common account of Christs birth) running on in the 1648. yeare thereof: which is also the yeare of the World 5658. This Age is called in many places of Scripture, the Last Age, and the Last of Times. See Heb. 1. 1. 1 Pet. 1. 20. 1 John 2. 18.

The Anatomy of Mans Body, as the parts thereof are governed by the twelve Signes.

♈ Head and face.

♉ Necke and throat.

♊ Armes and shoulders.

♋ Breast, stomacke, and ribs.

♌ Heart and backe.

♍ Bowels and belly.

♎ Reines and loynes.

♏ Secret members.

♐ Thighes.

♑ Knees.

♒ Legs.

♓ The Feete.

The beginning and ending of the Termes.

Hilary { The first of *Hilary* Term shall be / On *Ianuary* the twenty three: / And on the twelfth of *February*, / This term doth end most certainly. } *Term.*

Easter { And *Easter* Term from *Easter* day, / The wednesday fortnight 'gins alway: / And when the *Ascension* day is past: / Til munday next this Term doth last. } *Term.*

Trinit. { On friday after *Trinity* / This Term begins assuredly: / And as our Lawyers all do write, / It ends the wednesday fortnight. } *Term.*

Mich. { If *Michaelmas* Term you seek to finde, / *October* the 23. now bear in mind: / If ought I not well remember, / The twenty eighth day of *November*. } *Term.*

January hath xxxi dayes

Last quarter the 7. day, about 5 in the morn.
New Moon the 14 day 10 mi. past 6. at night.

Mens. 3.

SWALLOW,

The latter part of this Almanack for the yeare Of our Lord God, 1648.

Being *Biſſextile* or *Leap-yeare*, and from the Conqueſt of *England* by Duke *William*, 582.

Wherein

The day and houre of the Sunnes entrance into the foure Cardinall Signes is ſhewed, the Eclipſes declared, and other things related, fit for ſuch a Book, and worthy of obſervation.

Qui ſapit, ille animum fortunæ præponit omni,
Prævisumque poteſt arte levare malum.

LONDON.
Printed by *Bernard Alſop*, for the Company of STATIONERS.

The Character and Houſes of the ſeven Planets, &c.

♄ *Saturne*, His houſes, *Capricorne* and *Aquarius*.
♃ *Jupiter*, His houſes, *Sagittarius* and *Piſces*.
♂ *Mars*, His houſes, *Aries* and *Scorpio*.
☉ The *Sun*, His houſe is *Leo*.
♀ *Venus*, Her houſes, *Taurus* and *Libra*.
☿ *Mercury*, His houſes, *Gemini* and *Virgo*.
☾ The *Moone*, Her houſe is *Cancer*.
The Dragons head ☊
The Dragons tayle ☋

And note that ſuch or ſuch a Signe is called the Houſe of ſuch or ſuch a Planet; becauſe the Domination is greater there, then elſe-where: and ſo it is alſo for the houſes of the Heaven when the Sphear is divided into twelve parts.

The day and hour of the Suns entrance into the four Cardinall Signes this present Yeare, 1648.

First of the Spring.

The Cardinall Signes, are *Aries, Cancer, Libra*, and *Capricornus*, being as it were the hinges on which the year hangeth, and by which it is divided into foure quarters.

These quarters among the Jewes were called *Tekupha's*, or *Conversiones anni*: two of which fall into the Equinoxes, when the dayes and nights are equall; and two into the Solstitiall points, wherein there is as it were *Solis statio*, because for some dayes together the Sun seemeth to stand still, the dayes not sensibly perceived either to lengthen or shorten. The late Rabins of the Jews (most of them) begin the year from Autumn, from its naturall head: but the old Christian Fathers of the Church reckon from the Spring.

The sign with which this quarter enters is *Aries*, into whose first minute, the Sun cometh this yeare on the 9. day of *March*, 37. minutes past 8. a clock at night.

Of Summer.

The next quarter to this is Summer: the Cardinall Sign belonging to it is Cancer into which the Sun entreth this yeare on the 11. day of June, 3 minutes before one of the clock in the morning.

This word Summer, in the German tongue *Sun-mehr*; that is *Plus solis*, or more Sun than other times.

In this quarter on the 28 day of June, Saturn and *Mars* are in conjunction in the 11. degree of Gemini.

Of Autumne.

The next after Summer is Autumn; his signe *Libra*, into which the Sun enters this yeare on *Tuesday* the 12. day of Septem. at 13. min. past 3 in the Afternoon. This quarter takes his name from the Latine word *Autumno*, which signifies to make ripe. Or else it is *Autumnus a bonorum augmentatione*, from the increase of the Earth now gathered in.

Of Winter.

Winter (the last quarter) is called in Latine *Hyems*, which seemeth to bee derived from the Greek word ὑω, which signifieth to make moist or wet. His sign is *Capricorn*, into which the Sun entreth this year on Munday, being the 11. of December. 17. min. past two in the morning. And for the temper of the weather in all and every one of these four Quarters, I have already set down (according to what is probable) in each particular month throughout the whole year & shall therefore need to repeat nothing of it here again.

Hac duo Solstitium faciunt, Cancer, Capricornus
Sed noctes aquant Aries & Libra diebus.

Of the Eclipses this Yeare.

There will be four Eclipses this yeare, two of the Sun, and two of the Moon: whereof but one (and that of the Moon) will be visible in our Horizon. This Eclipse will manifest it selfe on Monday the 20. day of Novemb. It beginneth at 50 min. past 4 in the morning: & is in the greatest obscurity at 20. min. past 6, and by two min. past 8 will be quite and clean ended: So that the whole duration of it will amount to 3 hours and 23 minutes. And note that at the time of the greatest obscurity, all will be darkned, except 3 parts of the Moones body: for on her South side shee will then have so many parts free from Eclipse. Note also that the Luminare eclipsed is found to be in the 8 degree of Gemini, the same signe in which the two malevolents (Saturne and Mars) were in conjunction on the 28 of June before, and in which Saturn also was, at the time of his opposition to Mars, in *Octob.* 1647. By which, the effects of the said Opposition and Conjunction are but continued still, as far as I am able to judge; and of which, I doubt not, but some others will write at large.

And as for the other Eclipses, seeing they cannot be seen of us in *England*, I willingly forbeare to make any further mention of them,

A Chronological note of some memorable Accidents, shewing how long it is since any of them happened.

VIVAT REX.

of the four Cardinall winds, together with the effects in breeding or bringing Sickneſſe.

The East wind called Subſolanus, breedeth in cholerick bodies ſharp feavours, raging madneſſe, and perilous Apoſtumations, in winter is ever cold, it bloweth ſeldome in the night, and this one thing is proper to it that if it doe chance to bring rain, it continueth a whole day together.

The South-wind called Auſter, is of nature hot, and moiſt, it breedeth corrupt humours, and in hot bodies cramps, giddineſſe in the head, the falling-ſickneſſe, peſtilence & cruell fevers.

The Weſt-wind called Favonius, is of nature cold & moiſt, it breedeth Phlegme in moiſt bodies, it procureth ſleep, breedeth Apoplexies, and the like, In the ſpring it greatly refreſheth all things brings abroad the blood, and the ſound humours which lay bid in winter, much refreſhing the mind. Now beſt near the end of Autumn when winter begimneth to approach, it then growes churliſh both on the ſea and land.

The North-wind called Septentrio, is of nature cold and dry, it is good againſt the Peſtilence, and yet in cold bodies it breedeth Pluriſies, coughs, goutes, & in ſome ſquinancies: yet of all winds it is held to be wholſomeſt, although it be the ſharpeſt in our winter months.

Note that what is ſpoken thus of their eff
meant of their long ſtanding in the ſaid qua

prepar[illegible] humours by ſomething or other

…tive: and let this be whilest the Moon is …in Gemini, Libra, or Aquarius,

…take a vomit that it may worke throughly …the Moon is in Arie-, Taurus, or Capricorn.

…know that the aspects of the Moon in Sa-…n, or Mars, or the Moon in Leo, ought to be ob-…ved in the taking of medicines. Finally, if …ssity urge no haste, these observations are ex-…ient: for it is a plaine truth that the change …weather upon differing Aspects, doth greatly …rge and alter our bodies.

Things good for the eyes.

…L green coulours cold water, Fenel, the …ater of white roses distilled, Celendine, …bright, Vervine, Agremony, Cloves: and for …l eyes the juice of Houseleek softly boyled in …shell of a new laid Egge till it be cleane …mmed, is very good.

Things ill for the eyes.

…O look much at red colours, or at fire to read …on after supper, to eat Garlick, Onyons, …ilch-roots, salt meats, cole-worts, and pulse: …also to drink Wine that is both thick and …et. Smoke likewise and dust be very bad: and …anoint the eyes with Bats-blood will clean …them out; according to that old proverb, …e blood of a Bat will make a man see as well …night as by day: which may well be true in …that cannot see at all,

Things

Three Miles make one League.

The compasse of the whole Earth is held 21000. and 600. Miles, containing the full number of 300 and 60 degrees, each degree equall to threescore Miles.

The Sun in one houre goeth 900. miles, some have demonstrated: so the compasse of land is held to be 1532. Miles.

The Longest day at London is 16. hours and 30. minutes, at Yorke 17. within 2 being 28. minutes longer then at London.

The longest day at Cambridge is 61 hours and 34. minutes, longer by foure minutes the day at London and shorter by 24. minutes then the day at Yorke.

Observations concerning the weather.

When the Sun riseth clear, and not red and is red at his setting, and when the Moon at her prime (which 3 dayes and houres after the Change) appeares fair bright, it is a sign of fair weather: but if the Sun at his rising be fiery red, or a little after rising with clouds, and at his setting be overcast with a mist, or goe downe behind a cloud, if the horns of the Moon be blunt, or a black appeare in the midst of her, judge of foule weather.

judge

Things good for the Braine.

To smell to Camomill, Musk, or red-roses: to wash the temples often with rose-water: Sage measurably, to drink wine not over: to keep the body warme, to wash the head often, to walke and sleep measurably, to use Mustard and Pepper, and not to be troubled with too much noise,

Things ill for the Braine.

Late suppers, much sleep after meat, anger, to smell to a white Rose, garlick onyons, much milke and cheese, to stand long against your use bareheaded, to eat hastily and overmuch, to eat liberally on any kind of brains, much sweat labour or travell, and a belotted practise or ill course in drinking.

Other Notes fit to be knowne.

Note that sixty minutes make an houre. Forty five minutes make three quarters of an houre.

Thirty minutes make half an houre Fifteen minutes make a quarter of an houre. Twelve inches make a foote Three feet, or 36 inches make a yard. Three feet 9 inches, or 45 inches make an ell. Sixteene feet 6 inches make one Pole or Rod to measure Land withall. Forty Poles makes one Furlong. Eight Furlongs make one Mile.

Three

weather.

Observations for Husband-men and othe

IN January take off superfluous bra
from fruit-trees, and prepare your gro
Gardens, uncover Tree-roots, cut your
in some of the twelve dayes.

Set Quick-sets, Roses, and sallets i
moneth of February. And now cover up th
of your trées with good earth, which you
before in the begining of January.

March you may Graft, but in planting and ing chuſe a warme time: wherefore let not wind be in the Eaſt or North, becauſe ſuch are commonly nipping, eſpecially being by any aſpect of the Moone with Saturn, Venus in old ſignes as Virgo, Capricorn, Scorpio, Piſces, or Cancer.

In the end of Aprill, or begining of May, ſet low tender herbes and ſeeds in your Gar- in a good temperature of ayre.

If you mean to preſerve Flowers or ſeeds ſet them in a full Moon, let the Sun ſhine upon them, and they will keepe the ter, but let them not be dryed in the Sun, leſt ſun draw away part of their vertue.

Remove your trees either in the end of Oc- November, or February, the Moon increaſing be ſure to ſet that ſide South which was th before, becauſe it cannot endure the cold ath.

Sheare ſheep the Moon encreaſing, and their ces will grow the better againe. The like erve for cutting of haire, the Moon in Taurus, go, or Libra.

Geld cattell the Moon in Aries, Sagitarius, or pricorn, being in her laſt quarter.

Gather all fruits that you mean to keepe, in time, when the Moon is at the full.

Sow all ſuch ſeeds as have round roots (as ons, Leekes, Turneys, &c.) either three or four

foure dayes before the full, or three or [illegible] the full.

Of a Yeare.

In all matters legall the yeare begins with us untill the 25 day of March, [illegible] the yeare which doth begin on the first [illegible] nuary is the Julian yeare, instituted by [illegible] Cesar.

Of a Day.

A day in all legall or law matters [illegible] counted but from sunne to sunne; so that [illegible] who hath a sum of mony to pay one [illegible] by bond, need not tender his mony either [illegible] or after sun. This kinde of day is that which [illegible] callan artificiall day: but a day naturall [illegible] accounted from midnight to midnight, and [illegible] they reckon the day for indictments of mur[illegible]

Of Matthias in the leap yeare.

In every leap yeare the 24 and 25 days [illegible] February in suits at law are to be accounted both as one: But for keeping of faires which [illegible] to be on the 24 must be kept on the 25 be[illegible] Matthias is not untill the 25 when it is [illegible] yeare.

Of the Prime.

The Moon is said to be primed when she [illegible] dayes and 18 hours old, being then in her [illegible] quarter and foure points of the compasse [illegible] wayes from the Sun.

Table shewing the houre and minute of the Suns setting every second day in the yeare.
